

$\Delta\text{appl} \cdot \text{prune}$  $\Delta\text{appl} \cdot \text{prune}$ 

behavior score (A/B: MC pick-rate, chance = 0.5 | refusal / uncertainty: refusal-rate / hedge-rate, target = 0) arrow: base → post-BLADE ($\beta = 5\%$, $\rho = 0.005$)

Δappl on held-out WikiText (budget calibrated on C4); prune = weights zeroed / total params

† below the 0.10 exhibited-gate on this model; shown gate-bypassed — best-first still removes the behavior.

○ baseline ● post-BLADE (S3) — chance / target ✕ not exhibited (< 0.05) ✕ weak, below 0.1 gate
